In broad daylight movie streaming

The Streaming Wars are well underway. Apple, NBC, HBO, Netflix, Hulu, Disney and countless others are all vying for our attention and battling over exclusivity rights for our favorite shows and movies. So how do you figure out what is streaming where, when and for how long? In the video above, I go over some ways to track down streams of your favorite shows and movies. Just Google it! At the risk of sounding cheeky, just googling the name of the show or movie you're looking for is often the fastest way to figure out where to stream it. Google's algorithm usually does a good job of surfacing where you can rent, buy or stream a piece of content. Finding out Sam Raimi's "Spider-Man" is available to stream on Hulu was a cakewalk. However, not all Google search results are made equal: When I searched for the massively popular anime "My Hero Academia," the "Available on" widget pictured above didn't appear. Searching "how to watch My Hero Academia" did make the widget appear, but the information wasn't complete; Crunchyroll and Funimation, two of the most popular anime streaming services, didn't even show up. A better way to find your favorite content is to use dedicated sites like JustWatch or Reelgood. Both of these sites track and catalog where movies and TV shows are available to buy, rent or stream. You can make an account with either service and limit the search results to just the services you subscribe to. Both also offer mobile apps. Finding "Spider-Man" and "My Hero Academia" was simple on both sites, and both showed me a number of ways I could watch them. However, the data for "My Hero..." seemed out of date on JustWatch. It showed just two seasons of the show available to stream on Hulu and Funimation, but I know that's untrue. I just finished watching Season 4 a couple of weeks ago. Of the two, Reelgood is my personal favorite. The interface is much sleeker than JustWatch, the data appears more up-to-date (all 4 seasons of My Hero Academia properly cataloged), and I liked how I could keep track of shows I'd already seen or was interested in checking out. Many of the credit card offers that appear on the website are from credit card companies from which ThePointsGuy.com receives compensation. This compensation may impact how and where products appear on this site (including, for example, the order in which they appear). This site does not include all credit card companies or all available credit card offers. Please view our advertising policy page for more information. Editorial Note: Opinions expressed here are the author's alone, not those of any bank, credit card issuer, airlines or hotel chain, and have not been reviewed, approved or otherwise endorsed by any of these entities. Photo Courtesy: YinYang/E+/Getty Images; Logo Courtesy: Crackle Entertainment These days, there are endless options when it comes to entertainment apps, all of which bring blockbuster movies and hit TV shows right to our Smart TVs, Roku devices, and smartphones. But, as many viewers know, not all apps are created equal. Today we'll be taking a look at Crackle, one of the many (many, many) options available. So, what are the pros and cons of this service — and how does Crackle stack up in the crowded field of competitors? Crackle is one of the many streaming apps you're likely to see pop up when searching for entertainment options. Crackle's biggest draw for most people is the fact that it offers a selection of movies and TV shows that you can watch for free. Unlike most competitors, Crackle doesn't even offer a fee-based upgrade option in the United States or Australia. (However, the app is also offered on a subscription basis in the Caribbean and in Latin American countries.) Photo Courtesy: Maskot/Getty Images So, how does Crackle make any money? Well, that's one of the downsides. Its content is full of commercials, which can feel especially strange when you're watching a movie. Sony actually purchased Crackle in 2006, way ahead of the streaming revolution, but sold a controlling share of its stake to Chicken Soup for the Soul in 2019. While it may seem like a random combination, the two companies have since been working together to keep Crackle up and running. Let's just bottom line it: if you're looking for recent blockbuster hits, Crackle's not generally where you're going to find them. While there are far more movies than TV shows available in Crackle's selection, don't be surprised if you haven't heard of a ton of them. Photo Courtesy: filadendron/Getty Images The few films that do stand out tend to be those movies that you either completely forgot about or feature your favorite stars in roles you had no idea they played 25 years ago. That said, if you're feeling adventurous — or if you're a total movie buff who feels like you've already seen every movie ever made — Crackle may be worth a look. Moreover, there are plenty of direct-to-video or little-known indie films to choose from, as well as a handful of old favorites and hidden gems. There is also a selection of old sports offerings (think 2019 MLB World Series) and some "Crackle Originals" — standouts range from the Adam Brody-helmed drama Startup to hit crime-thriller The Oath. You'll also find a sprinkling of non-original TV shows, but the downside is that many of them aren't complete — meaning you'll find sporadic seasons of your old favorites. And, let's be honest, that doesn't make for great marathon viewing. In fact, it's kind of reminiscent of the video store having seasons one and three of your new favorite series, while season two is seemingly always rented out. That being said, Crackle is sort of the app equivalent to that TV channel you sometimes settle for when there's nothing else on. One benefit to Crackle is that you can watch it on pretty much any device you want without ever signing up for an account. Since there's no subscription option, the only real reasons to sign up for an account are to create a watchlist or utilize features like closed captions and parental controls. Photo Courtesy: damircudic/Getty Images Looking to get started? You can either stream the service directly from its website or download the Crackle app on your Roku, smartphone, or other device. Once your download is complete, the app will give you an activation code. Once that process is complete, you'll find that Crackle's interface is pretty bare-bones and features just three categories: movies, TV, and search. Once you select either movies or TV shows, however, you can browse by genre — or, if you have no idea what to watch, you can have all the available titles presented in alphabetical order. If you choose instead to use the search feature, you can look up selections by typing in either a title, actor, or genre. Another thing to keep in mind? Crackle's content is constantly revolving, so most of it is only available for a limited time. Usually, the app will give you a head's up by featuring a soon-to-depart selection under the "leaving this month" section of the homepage. Crackle is simply not the kind of app that's designed to compete against fee-based streaming services like Disney+, HBO Max, Paramount+, or Hulu. Its main draw is that it's free, which is also why it's not going to feature the same level of content as some of the hottest, subscription-based streaming apps. That said, it's no longer alone when it comes to offering loads of ad-filled content for free. Photo Courtesy: Paramount Pictures/IMDb So, how does it stack up against other free streaming apps? Honestly, we've seen better. While it never hurts to have Crackle as an option — we did mention it's free, right? — there are definitely other free options that tend to feature higher-quality content. Here are some of the best: Peacock Created by NBCUniversal, Peacock is one of the newer streaming services out there. It's sort of a happy medium between Crackle and Netflix: it has several subscription options including a pretty great free one, and, while there are commercials, if you choose to go the free route, there are also thousands of hours worth of movies and TV shows that you'll actually recognize. Additionally, Peacock offers news and sports content, with a whole section dedicated to WWE events, if that's your thing. The interface is also far more robust, which makes it easier to find the type of content you're looking for. Last but not least, it even includes a live TV option, so that you can watch a selection of live channels for free. Roku Whether you actually own a Roku device or not, the Roku Channel is another solid choice. Perhaps it's no surprise that the easiest way to access it is through a Roku device, but folks without Roku products on hand can access the channel's content through a web browser or by downloading Roku's app. Similar to Peacock, the Roku Channel features a huge selection of popular content that you can watch for free with ads — but it also offers premium subscriptions if you should choose to upgrade. Best of all, it features a great mixture of newer and older content. And that older content is actually worth a rewatch most of the time, especially for fans of classics like Who's the Boss, I Dream of Jeannie, and The Beverly Hillbillies. Additionally, the Roku Channel also recently added live TV channels to its offerings, which is awesome news if you're looking to cut the cable cord. With live content from over 100 channels, you'll find free reality shows, sports, news, crime dramas, and more. Tubi In our recent write-up, we noted that Tubi is a "streaming service that won't impact your budget — at all." Despite being founded back in 2014, Tubi has recently started growing in popularity, and, as a result, offers a vast variety of popular television shows and movies — all available to watch for free. Sounds too good to be true, right? Well, it isn't, so long as you're willing to make a few concessions. is in broad daylight on netflix. is the movie in broad daylight on netflix
