Facebook audience network native ads android

Custom Native

Set up Custom Native Network

Special Instructions

- Custom Native Networks require the development of a Custom Event Class
- You must enter a Custom Class to enable ad serving for this type of network. Custom Event Class IDs can be sent down in JSON format. Note: Custom Native Networks using a Custom Method implementation will not be supported in future MoPub SDKs.

How to show facebook audience network native ads in android recyclerview.

Depending on the Facebook SDK version you are integrating, you must show only either the ad title or the advertiser name. For detailed steps on how to go live with Facebook Audience Network through Advanced Bidding check our Advanced Bidding documentation. MoPub Formats Facebook Audience Network Ad Formats Banner Banner (Note: To request banner ads with a height greater than 250, you must configure your Facebook placement as a 'medium rectangle' on the Facebook dashboard. If you are on iOS, adapters will automatically manage the showing of the correct asset, based on your Facebook Audience Network SDK version. iOS wrapper code contribution by lolqplay team from birdgang Implement Rewarded video for iOS platform. Map facebookNativeBanner = new HashMap(); facebookNativeBanner.put("native_banner", "true"); In your SdkConfiguration.Builder, pass the Map described above to the withMediatedNetworkConfiguration() call before initializing the MoPub SDK: SdkConfiguration.Builder configBuilder = new SdkConfiguration.Builder("YOUR_AD_UNIT_ID"); configBuilder.withMediatedNetworkConfiguration(FacebookAdapterConfiguration.class.getName(), facebookNativeBanner); // Initialize MoPub iOS Ad Placer Integration In your app, before you initialize MoPub, create an NSDictionary holding an (NSString : Boolean) pair that contains your native banner preference. Set Up Facebook Audience Network on the MoPub Dashboard Placement ID is required. iOS 14.5 If you are building for iOS 14.5 and using v6.0.0 (or newer) of the Facebook Audience Network SDK, refer to Facebook's documentation for more details. Run the app. Facebook Audience Network plugin for Flutter applications (Android & iOS). If you plan to use the MoPub SDK to load and display ads from Facebook Audience Network via mediation, use this article for integration instructions and information unique to the ad network. Follow the appropriate instructions below based for your platform and native ad integration. If you are using your own mediation adapter class names, make sure that both the old custom native network and the new Facebook Audience Network network UI are set up for backward compatibility. For more information about Facebook's implementation requirements, refer to Facebook's article about native ads. Because Android 9 blocks cleartext traffic by default, you must add the following XML configuration to your app's Manifest to allowlist unsecure traffic (more details here): 127.0.0.1 Request Native Banner Ads MoPub now supports Facebook Audience Network native banner mediation starting with v5.6.0.0 of the Android and iOS adapters. Set the flag's value to "true" (include the quotation marks because this API expects a String) to request native banner, or "false" (or don't set it at all) to request regular native ad. NSDictionary * facebookConfig = @{@"native_banner" : true}; In your MPMPoPubConfiguration object, pass that NSDictionary to the mediatedNetworkConfigurations call before initializing the MoPub SDK: MPMPoPubConfiguration * sdkConfig =

[MPMoPubConfiguration alloc] initWithAdUnitIdForAppInitialization: @"YOUR_AD_UNIT_ID"; NSMutableDictionary * config = [:@{@"FacebookAdapterConfiguration" : facebookConfig] mutableCopy]; sdkConfig.mediatedNetworkConfigurations = config; // Initialize MoPub That's it! When you make your ad request, we'll inform Facebook that this is a native banner ad request. Supported Ad Formats Facebook Audience Network currently supports the following ad formats. "YOUR_ANDROID_PLACEMENT_ID" : "YOUR_IOS_PLACEMENT_ID", bannersize: BannerSize.STANDARD, listener: (result, value) { switch (result) { case BannerAdResult.ERROR: print("Error: \$value"); break; case BannerAdResult.LOADED: print("Loaded: \$value"); break; case BannerAdResult.CLICKED: print("Clicked: \$value"); break; case BannerAdResult.LOGGING_IMPRESSION: print("Logging Impression: \$value"); break; } },). }) FacebookInterstitialAd.loadInterstitialAd(placementId: "YOUR_PLACEMENT_ID", listener: (result, value) { if (result == InterstitialAdResult.LOADED) FacebookInterstitialAd.showInterstitialAd(delay: 5000); },); (Android Only) FacebookRewardedVideoAd.loadRewardedVideoAd(placementId: "YOUR_PLACEMENT_ID", listener: (result, value) { if(result == RewardedVideoResult.LOADED) FacebookRewardedVideoAd.showRewardedVideoAd(); if(result == RewardedVideoResult.VIDEO_COMPLETE) print("Video completed"); },); NativeAdType NATIVE_AD_HORIZONTAL & NATIVE_AD_VERTICAL ad types are supported only in iOS. Android Manual Native Ad Integration In your native ad implementation, create a Map object containing your native banner preference. Banner AdNative Banner AdNative Ad Interstitial AdRewarded Video Ad For testing purposes you need to obtain the hashed ID of your testing device. Test mode must be set up on both the MoPub side and the Facebook side. Network Reporting and Auto CPM The following setup is required to take advantage of Auto CPM. height property is ignored for native banner ads. Facebook placement IDs can be enabled for native or native banner demand. Migrate Facebook Audience Network from Custom Native Setup Transfer Placement ID (if applicable) from the old custom native connection to the supported Facebook Audience Network instance. MoPubNative.setLocalExtras(localExtras); // Make your ad request Optional: If you plan to alternate between regular native and native banner requests, we recommend that you prepare separate XML layout files, one for each format. To enable Facebook network reporting and Auto CPM: Navigate to the MoPub UI's Networks tab. Facebook test ads are only delivered to your test device. The hashed id will be in printed to the logcat. To show the advertiser name asset on Android, follow our Android network integration instructions. To learn more about how MoPub mediation works, refer to our MoPub Network Mediation article. Then, when you register your native ad renderer (because at this time you are in control of which format is requested), you can pass in the corresponding layout to your renderer. Map localExtras = new HashMap(); localExtras.put("native_banner", true); Pass the Map described above to your MoPubNative instance before making the ad request. FacebookNativeAd(placementId: "YOUR_PLACEMENT_ID", adType: NativeAdType.NATIVE_BANNER_AD, bannerAdSize: NativeBannerAdSize.HEIGHT_100, width: double.infinity, backgroundColor: Colors.blue, titleColor: Colors.white, descriptionColor: Colors.white, buttonColor: Colors.deepPurple, buttonTitleColor: Colors.white, buttonBorderColor: Colors.white, listener: (result, value) { print("Native Ad: \$result --> \$value"); },). Check out the example for complete implementation. Set the flag's value to true to request native banner, or false (or don't set it at all) to request regular native ad. The Facebook UI supports a global test mode, which you can enable for each platform and target to specific test devices. This gives you more control over the layout of your assets. Subsequently, to change your preference, repeat step 1. Pass a flag to MoPub to indicate your preference for native or native banner demand. You must also download the Facebook Audience Network SDK: For the latest download and integration instructions, consult Facebook Audience Network's tutorials before you integrate the SDK and adapters. To obtain the hashed ID: Call FacebookAudienceNetwork.init() during app initialization. You can find the Facebook business ID from the URL of the Facebook Business Banager or Monetization Manager portal. Facebook Audience Network is transitioning to a Bidding only ecosystem in 2021. Additional Support For inquiries and support, visit Audience Network's support center. Refer to Facebook's instructions for test mode setup in the Facebook UI. Localhost Allowlisting Facebook uses the device's localhost (127.0.0.1) to cache ad media files. Data Processing Options for Users in California For information about implementing Facebook's Limited Data Use flag, refer to Facebook's developer documentation. Android Ad Placer Integration In your app, before you initialize MoPub, create a Map object containing your native banner preference. Test an Ad We recommend that you test your Facebook integration using MoPub mediation test mode to verify that the adapter works as expected. Refer to Facebook's announcement for more details. Expands the adview with animation when ad is loaded listener: (result, value) { print("Native Ad: \$result --> \$value"); },). Use NativeBannerAdSize to choose the height for Native banner ads. Publishers are required to be on Facebook Audience Network SDK 6.2.1+ to monetize iOS 14 traffic when Apple introduces their privacy changes. Important: During migration, make sure that the custom native network and the Facebook Audience Network network are not both live at the same time, because this may impact your revenue. Using a placement of type 'banner' won't return ads in this case.) Medium Rectangle Medium Rectangle Interstitial Interstitial Rewarded Ad Rewarded Video Ad Native Native, Native Banner (see instructions below) Download and Integrate To download the Facebook Audience Network adapters, navigate to the Mediation Integration Tool. (Refer to these additional instructions that provide more detail for the remaining steps.) In the Network settings page for Facebook: enable reporting access provide the the System user token and Facebook business ID For the System user token, consult this Facebook help article, with instructions on how to generate a reporting token to use in the MoPub UI. FacebookAudienceNetwork.init(testingId: "37b1da9d-b48c-4103-a393-2e095e734bd6", //optional iOSAdvertiserTrackingEnabled: true //default false); IOS Setup In Pod file, set the IOS deployment target version to 9.0 IN iOS, Banner, Interstitial and Native Ads are supported Container(alignment: Alignment(0.5, 1), child: FacebookBannerAd(placementId: Platform.isAndroid ? Place the FacebookBannerAd widget in your app. Refer to our Mediation Test Mode article for complete details on using this mode. MPNativeAdRequestTargeting *targeting = [MPNativeAdRequestTargeting alloc] init]; targeting.localExtras = localExtras; // Make your ad request (Optional) If you plan to alternate between regular native and native banner requests, we recommend that you prepare separate layout files, one for each format. Navigate to the Auto CPM preferences page and turn on Auto CPM. Audience Network will exclusively use real time bidding to fill ads in iOS apps beginning June 1st 2021 and October 1st in Android apps. In Android use NATIVE_AD. If you experience problems when implementing the System User Access Token, refer to Facebook's System User Token Generation documentation. FacebookNativeAd(placementId: "YOUR_PLACEMENT_ID", adType: NativeAdType.NATIVE_AD, width: double.infinity, height: 300, backgroundColor: Colors.blue, titleColor: Colors.white, descriptionColor: Colors.white, buttonColor: Colors.deepPurple, buttonTitleColor: Colors.white, buttonBorderColor: Colors.white, keepAlive: true, //set true if you do not want adview to refresh on widget rebuild keepExpandedWhileLoading: false, // set false if you want to collapse the native ad view when the ad is loading expandAnimationDuration: 300, //in milliseconds. To get started, create a native banner placement on the Facebook Audience Network dashboard. Paste that onto the testingId parameter. iOS Manual Native Ad Integration In your native ad implementation, create an NSDictionary holding an {NSString : Boolean} pair that contains your native banner preference. MoPub will initiate the following Facebook Audience Network mediation adapter class names to render the ads: iOS FacebookBannerCustomEvent FacebookInterstitialCustomEvent FacebookRewardedVideoCustomEvent FacebookNativeCustomEvent Android com.mopub.mobileads.FacebookBanner com.mopub.mobileads.FacebookInterstitial com.mopub.mobileads.FacebookRewardedVideo com.mopub.nativeads.FacebookNative If you are manually entering these class names, migrate to the new network setup and pause the Custom Native Network. NSDictionary *localExtras = [:@{@"native_banner" : true}]; Pass the NSDictionary described above to your MPNativeAdRequestTargeting instance before making the ad request. For support information, visit the Facebook Audience Network homepage.
