This allows you to install more applications, store more videos and songs, and so on. But, as with any file, it's completely possible for accidentally eliminated photos, music files and video files. If it happens, you could assume that you're king out of luck but there are ways to recover deleted files on an Android device. Here's everything you need to know about data recovery of the SD card for Android. Why do you can recover deleted files on Android Did you know that when you delete files on your phone or computer, They're King not really deleted to everyone? On an Android phone, when you delete a file, mark Android the space that it's taking as an empty. In other words, it acts as if it has free space. And when you need that space, you will write on that file. But in the meantime, before it overwrites the file with a new file, the old files are still there, even if it doesn't occurs as available within Android. Because of this, there are some ways to increase the possibility of being able to recover a deleted file. No matter when you find out you canceled a file you need, you should stop using the phone as soon as possible, as soon as it turns out that the files were lost. Donate to Install any new apps, the Don't Take all the other photos, and don't Download no files to how it is possible that these files will be written over the old file you lost. A good way to make sure that you donate accidental download files in the background is to put the phone in plane mode. In this way, the phone won't automatically images and e-mail sent to you. Or, if you can endure not to use the phone right now, you could completely turn off the device that way even the Android operating system is writing over the old files. Where to search for lost Android files Once you have stopped using your phone and ensured that it is no longer file writing in the SD card, there are some things to check before resorting to more intense data recovery techniques. Maybe the first thing to do is to check if the file you are It was placed in any type of basket. As you do it will be widely variable depending on the app you use, but, for example, in the Google Photos app you can find deleted items, tap Library at the bottom, then touch the waste folder. You can then hold onto the photo and touch the button 'restore'. Again, however, for other specific apps, you will need to search at the top if there is a basket folder or deleted elements. There are other situations where you might have lost files and as you approach the situation can vary depending on what happened. For example, if you have lost files due to a virus attack, you need to immediately switch off the device and jump directly into the data recovery tool below. The same applies to any device's error, or situation where you can't activate the phone, as if you have damaged it. It is also worthwhile to check the messaging apps, if you sent the files lost to friends or family, or they sent them to you. For example in whatsapp, you can see the files sent and received by opening the app, touching the name of the contact you sent or received it, touching the name again at the top of the screen and touching the 'Media, connections and button docs'.
