This is the CHEQSITE app for inspecting hydrants in accordance with DGUV, DIN, OSH & HSE PUWER regulations. Employers may discretely deviate from the specifications of the ASR and meet the protection goal specifications of the Workplaces Ordinance, including the annex, differently. - Improved transparency and compliance. Within the ordinance, the minimum requirements of the mentioned EU directives are implemented directly. Ultimately, the fifth section addresses complementing requirements for workplaces not enclosed on all sides and located outdoors, as well as for construction sites. Assign codes / IDs to equipment and add defects or hazards. You wish to make a site audit, a construction snag list, or you need a complete asset management solution, our PRO software team is at your disposal. In chapter 1 of the annex to the ordinance, general requirements regarding the structure of workstations are included. The question of whether employers must adapt the workplace in accordance with the new rules or whether the existing workplace continues to comply with the requirements of the Workplaces Ordinance may only be answered by repeating the risk assessment. - Generate uniform reports and documentation. - Standardized inspection process & documentation. - Use pre-installed checklist templates or create your own inspection lists. Objective of the Workplaces Ordinance The Workplaces Ordinance (ArbStättV) has the objective of protecting employees in workplaces and contributing to the prevention of industrial accidents and occupational diseases. The paragraph part of the ordinance further includes, in addition to provisions for configuring and operating workplaces (§3a and §4) and the regulation regarding non-smoker protection (§5), specific provisions for working spaces, sanitary rooms, break rooms, ready rooms, and first aid rooms, as well as quarters (§ 6). A significant part of the reported accidents can be attributed to the improper condition, equipment, and maintenance of workplaces, e.g. falling accidents on damaged flooring and stairways, as well as transport accidents on inappropriate or too narrow traffic routes. - Import and export data, e.g. via cloud services or in-house servers. With the coming into effect of the BGV A1 "Grundsätze der Prävention" (basic prevention principles) (hitherto VBG 1) since 1st January 2004, accident insurers also obtained a legal basis for fulfilling their prevention tasks with the help of official occupational health and safety regulations. 56 page 2681). This provides the employers with increased freedom regarding their decisions for the organisation and operation of the workplace. It is intended for employers who must ensure that the workplace does not entail any hazard for the employees and remaining hazards are kept as low as possible. The third section establishes essential working conditions, such as movement area, arrangement and equipment of workstations, climate conditions, including air temperature and ventilation, as well as illumination and noise. BENEFITS - Significant time savings with each inspection. National laws in the EU further result from the European Union Occupational Safety and Health Act (EU-OSHA). The ordinance came into effect on 3rd December 2016. The obligation to inspect workplaces and work equipment results from national laws in your country, such as the ArbSchG Arbeitsschutzgesetz in Germany, Occupational Safety and Health Act (OSHA) in the US, Health and Safety at Work Act in the UK, etc. Please also have a look at the instructions on the CHEQSITE YouTube channel. However, severe accidents by cracking glass walls or glass inserts in doors or diseases caused by operating noise disadvantageous to the health should be avoided as well. A Committee on Workplaces consults the Federal Ministry of Labour and Social Affairs (BMAS) and has the task of determining rules for workplaces (§7). You want to easily document defects and hazards? Our service team will be happy to assist you with the setup and use. Please have a look at the service offers on our website. Measures for protection against special hazards such as falling and incipient fires, as well as specifications for escape and rescue routes are mentioned in the second section. - Modern appearance towards customers and employees. This section was inserted within the framework of the most recent change to the ArbStättV in November 2016. A CHEQSITE account is required to use this app. If employers implement the ASR, they may assume that they are complying with the provisions of the ArbStättV regarding the field of application of the ASR (presumption of conformity). The ArbStättV specifies general protection goals instead of specific figures and detailed requirements. - Store order data, customer data and contractors. Make your own checklists or get in touch with our special template service team. The inspection report contains a management summary of the inspected objects / sites as well as a detailed list of defects and hazards including photos and information, such as required actions and responsibilities. All digital and customizable to your national occupational safety and health standards? The Workplaces Ordinance serves to ensure the safety and protection of the health of employees when configuring and operating workplaces. Safety and health protection The ArbStättV consists of a decree part with a total of ten paragraphs and an annex containing requirements for workplaces divided into six sections. Import your customer data from the address book or previous inspections. Included templates / checklists: Hydrants operator inspection, above and underground hydrants, wall hydrant With the CHEQSITE applications you do on-site workplace and asset inspections much faster and more efficiently. Use preinstalled DGUV checklists or customize the templates according to your specific needs as suggested by national OSHA, HSE, PUWER, ANSI, EHS, and further legal and company specific regulations. However, the Workplaces Ordinance does not specify any obligation for applying the ASR. The execution of the ordinance is incumbent upon the occupational health and safety regulating authorities (Trade Supervisory Boards and agencies for occupational health and safety, respectively). Additionally, Directive 92/58/EEC of the Council on the minimum requirements regarding the safety and health protection labelling at the workstation is also implemented by a dynamic reference within the Workplaces Ordinance. You are looking for a lean software application for the regular occupational safety inspection of workplaces and work equipment? Information on sanitary, break, ready, and first aid rooms, as well as quarters can be found in the fourth section. Where ever the announcement of workplace rules includes new requirements based on the continuous development of the state of the art and the measures may only be implemented in the already configured and operated workplaces with comprehensive modifications or significant expenditure, the question of preservation of the status quo arises. The technical rules for workplaces are an essential aid for the practical implementation of the ArbStättV. The ARS refer to current state of the art at the time of publication. Technical rules for workplaces (ASR) The technical rules for workplaces (Arbeitsstättenregeln - ASR) describe measures and practical implementation aids and explain how protection goals and requirements regarding the safety and health of employees when configuring and operating workplaces included in the Workstation Ordinance can be achieved by employers. The Ordinance on the Amendment of Occupational Safety Regulations (article 1 modification of the Workplaces Ordinance) was published in the Federal Gazette (part 1 no. The laws are implemented by a number of legal ordinances which in turn are further specified and supplemented by regulations, rules, and principles, e.g., the Technical Rules for Industrial Safety (TRBS), Provision and Use of Work Equipment Regulations (PUWER), etc. Our application experts will then create your custom checklist for you. The last section includes measures for organising Visual Display Unit (VDU) workstations. FUNCTIONS OVERVIEW - Inspect on site - no Internet access required. It is particularly important that companies take into consideration the interests of handicapped persons regarding safety and health protection (§ 3a). Furthermore, the annex IV parts A and B of the Directive 92/57/EEC of the Council on the minimum requirements for safety and health protection to be applied to temporary or mobile construction sites is implemented. This mainly includes requirements regarding air, climate, and illumination conditions beneficial to health and regarding immaculate social facilities, particularly sanitary and recreation rooms. The ordinance is intended to implement the EC Workplaces Directive 89/654/EEC on a national basis. 44 from 24 August 2004, page 2179) contains minimum requirements for protecting the safety and health of employees when configuring and operating workplaces. Furthermore, the ArbStättV serves the humane organization of work. Amongst other things, this refers to room dimensions, floor materials, rooftops, windows, doors, and traffic routes, as well as moving walkways, loading ramps, and ladders. In this case, they must eliminate or reduce the determined hazards that employees are or may be exposed to differently in such a way that the same level of protection is achieved as with the ASR ("state of the art"). They make the performance of the risk assessment pursuant to § 3 of ArbStättV and the definition of suitable measures for the health and safety of employees within the company easier for employers. Here, reference is made to safety marking and general requirements regarding the structure and firmness of workplaces according to the type of use. At the next inspection you simply scan them, and the equipment information is automatically applied. - Assign and scan codes / IDs to equipment and facilities, e.g. barcodes, QR codes, etc. Contents of the Workplaces Ordinance The Workplaces Ordinance - ArbStättV (Federal Gazette I no. - Document defects and hazards with photos. At the end of the process, you create uniform reports and easily share them with your customers and partners, e.g. via cloud services or email.
