ASSESSMENT 18

LESSON 25

Math 1

1. There were eight crackers on a plate. Phil ate four crackers. Draw a picture and write a number sentence to show what happened.

Number sentence _____

How many crackers are on the plate now? _____ crackers

2. Count the tally marks. How many tally marks are there? _____ tally marks

3. Color the X, Y, and Z on this chart.

31	32	33	34	35	36	37	38	39	Y
Z	42	43	44	45	46	47	48	49	50
51	52	53	54	55	56	57	X	59	60

What number belongs in the square with the X? _____

What number belongs in the square with the Y? _____

What number belongs in the square with the Z? _____

4. Divide the squares in half two different ways. Color one half of each square red.

5. Write five different examples that have a sum of 6.

1st grade saxon math grade 1 worksheets pdf. 1st grade saxon math grade 1 worksheets. Saxon math grade 1 worksheets pdf.

Hoping to help your fourth-grader with math skills? Here are some basic tips that experts suggest. It's around fourth grade that many youngsters become discouraged by math and begin to think of it as a subject they're just not good at. Be aware of this and try to prevent your child from developing a defeatist attitude toward math. Encourage them to stick with it when a problem appears difficult and to approach it in different ways. If your child is struggling with math problems, have them read each problem out loud slowly and carefully, so your child can hear the problem and think about what is being asked. This helps them break down the problem and come up with problem-solving strategies. Continue to find ways to integrate discussion of math concepts such as "times as much" into your everyday activities. Compare the weights of your fourth-grader and their siblings, or the family pet. Figure out how many times your cat's weight your child weighs, and how many times your child's weight their father weighs. Encourage your child to spot examples of some of the math concepts they are learning about. See how many right angles or right triangles your child can spot. Or have them look for parallel lines, such as train tracks or pillars in a building. Baking and cooking are among the best ways to familiarize your fourth-grader with how fractions work. Having them help out in the kitchen also reinforces valuable sequencing skills and time management concepts. When you have a long trip to take in the car and your child asks how long until you get there, have them answer the question themselves by using math. Tell them how fast you're traveling and how far away you are, and see if they can estimate how long it will take you to arrive. Encourage your child to use their math skills for projects around the house. If you're wallpapering or carpeting, for example, have them calculate wall or floor areas and figure out the total cost of various materials. Sports provide a fun and engaging way of exploring a host of mathematical concepts, starting with basic addition. The halves of a soccer game or the quarters of a football game offer an illustration of how fractions work in the real world. If your child enjoys a sport, encourage him or her to explore it through math. Music is a great way for your child to engage with concepts related to math. Practicing an instrument means learning about tempo, measure, and meter—all of which involve math. Plenty of family games incorporate math. Tic-tac-toe, Connect Four, many card games, and dominoes are just some of the games that help build strategic thinking and math skills. To find out what your fourth-grader will be learning in math class, check out our fourth grade math skills page. Parent Toolkit resources were developed by NBC News Learn with the help of subject-matter experts, including Joyce Epstein, Director, Center on School, Family and Community Partnerships, Johns Hopkins University; Pamela Mason, Program Director/Lecturer on Education, Harvard Graduate School of Education; Denise Walston, Director of Mathematics, Council of the Great City Schools; Nell Duke, Professor, University of Michigan; Leanna Baker, Retired Math Teacher; Bon Crowder, Math Teacher and Blogger, MathFour.com; Robin Schwartz, VP, Association of Teachers of Math of NYC, and align with the Common Core State Standards. Page 21E 11 is not supported. For an optimal experience visit our site on another browser. Tune in to Peacock's Steals & Deals: Throwback Edition on TODAY All Day Word problems can be challenging for students, especially second-graders, who may still be learning to read. But, you can use basic strategies that will work with nearly any student, even those who are just starting to learn written-language skills. To help second-grade students learn to solve word problems, teach them to use the following steps: Survey the math problem: Read the word problem to get an idea of its general nature. Talk with your students about the problem and discuss which parts are most important. Read the math problem: Read the question again. This time, focus on the specific details of the problem. Which parts of the problem relate to each other? Ask questions about the operations involved: Reflect again. Determine the specific math operations the problem is asking you to perform, and list them on paper in the order they are to be performed. Question yourself about the steps taken: Review each step you took. Determine if your answer seems reasonable. If possible, check your answer against the book's answers to determine if you are on the right track. Wrap it up: Scan through the text of the word problems you will be solving to identify any words you do not recognize. List them and determine their meanings before solving the problems. Write brief definitions of the terms for your reference during problem-solving. After reviewing these strategies, use the following free word-problem printables to let the students practice what they've learned. There are only three worksheets because you don't want to overwhelm your second-graders when they are just learning to do word problems. Start slowly, review the steps if needed, and give your young learners a chance to absorb the information and learn word problem-solving techniques at a relaxed pace. The printables contain terms with which young students will be familiar, such as "triangle," "square," "staircase," "dimes," "nickels," and the days of the week. D. Russell This final printable in the set contains slightly more difficult problems, such as this one involving money: "You have 3 quarters and your pop cost you 54 cents. How much money do you have left?" To answer this one, have students survey the problem, then read it together as a class. Ask questions such as: "What could help us solve this problem?" If students are unsure, grab three quarters and explain that they are equal to 75 cents. The problem then becomes a simple subtraction problem, so wrap it up by setting up the operation numerically on the board as follows: 75 cents - 54 cents = 21 cents.
