The eighth main version of the Android 8 Mobile operating system is channeled here. To know the character Dragon Ball, contact the Red Ribbon Army § § Android Oreo version Android operating system for Android 8.1 with the development of the pixel thrower on August 21, 2017; 5 years ago (August 21, 2017) [1] Final production 8.1.0_R93 (OSN1.210329.015) [2] / 4 October 2021; 17 months ago (2021-10-04) final preview8.0 (Ops6.171019.012) / November 27, 2017; 5 years ago (2017-11-27) the predecessor Android 7.1.2 "Nougat" by Android 9 of Android 9 is supported by Android Status Oneo (code name during the publication of Android or E and Android Mobile Operating System Version 15. It was first published as a temporary version of the Alpha version for developers in March 2017 and published on August 21, 2017 to the public. Basic functions, including group notifications that support the video "Figure", improvement of productivity and battery. Optimization of the use and car support, Bluetooth 5, integration of VoIP systems, large combination of colors and Wi -Fi. Android oreo also offers two main functions of the platform: Android Go - distribution of the software of the operating system for devices with low food For the introduction of the abstraction levels H ardware. From December 2022 [Update], 8.17 % of the Android devices were und he Android Oreo, of which 5.11 % Android 8.1 (bees 27) and 2.06 % - Android 8.0 (API 26) were. [3] Android or 8.0 Logo Home History Android 8.0 Android Oreo was the name of the internal code "Cooky of Hafermehl". Nexus 5x, Nexus 6p, Nexus player, Pixel C and both pixel smartphones. The second, which was considered a beta quality, was released on May 17, 2017. The third preliminary version of the developers was published on June 8, 2017 and offered the final version of the API. [10] DP3 completed the API level 26 bees, [10], [10] The camera user interface, returned to Wi-Fi-levels and mobile messages on the left, new symbol, new symbol and a new symbol and a new one Symbol and a darker background for the "watch" application and the symbol in the form of a decline in applications. The fourth preliminary version of the developers was published on July 24, 2017, including the final version of the system.The eighth main version of the Android mobile operating system is listed here as "Android 8". For the Dragon Ball character, see Red Ribbon Army §§§§§Cooking for Android 8. Android Oreo OS version running Android OS running Android 8.1 home screen with early 217, 2017; 5 years ago (2017-08-21) [1] Final version 8.1.0_R93 (OSN1.210329.015) [2] / 2021-10-04; 17 months ago (2021-10-04) Last Preview 8.1.0 (Opp6.171019.012) / Nov 27, 2017; 5 years ago (2017-11-27) Kernel Tümonolithic Core (Linux Kernel) Older Version 7.1.2 "NOUGAT" Achievement Watch 9 "Official Website Official Website The Biggest Version I 15th version of Android Mobile OS. It was first released in March 2017 as a developer preview in ALFA I quality and was available on August 21, 2017. Notification bundling includes a number of important features, including photos, performance improvements, a battery for the movie, optimized use and operation of autofill, Bluetooth 5 applications, system-wide VoIP , wide color gamuts and Wi-Fi ready. Android Oreo also offers two main platform features: Android Go - the software distribution of the operating system for low-end devices - and support for the application of the application in the hardware layer As of December 2022 [Update], 8.17% of Andro devices id, 5.11% Android 8.1 (API 27) and 2.06% Android 8.0 (API 26) and Android Oreo.[3] Android past 8.0 Logo Android 8.0 hot t in the internal Android Oreo called "Cookie Porridge". For Nexus 5x, Nexus 6p, Nexus Player, Pixel C and both Pixel smartphones [8] the second version was released on May 17, 2017, which is accepted as beta quality. [9] The third programmer preview was released on June 8th. 2017 and introduced the latest version of the API. [10] DP3 completed the release API interface since API 26, [10] Changed user interface, returned Wi-Fi and cellular connections in the status bar in the left position of Wi-Fi, added notifications on the topic, added animation battery animation : Battery is a new clock application icon and teardrop icon for darker wallpapers and applications. On July 24, 2017, the fourth programmer with the latest system was released.And the latest bug fixes and optimizations. [11] Android O was officially released in 2017. August 21 In the Word Oreo. His lawn statue was unveiled at a promotional event in front of Chelsea Market in New York, the building that housed the first Mosco factory. Factory images were later made available for compatible Dots and Nexus devices. [12] [13] The Sony Xperia XZ1 and Sony Xperia XZ1 Compact were the first devices with Oreo preinstalled. [14] Android 8.1 was released in 2017. December. Pixel and Nexus, including minor bugs and UI changes. [15] See also: Android 8.0 Android version history and Android 8.1 Android 8.1 Android version history can be delayed and classified into thematic groups called "channels" [16], and the top place adds the most important program. [18] Android Oreo is an embedded image. [19] [20] [21] [22] The Settings app has a new design that is stripped down with white themes and deeper categories for various settings [23] [24] and its ringtone, alarm and alarm settings are now included ability to be the ability to know how to add your own sounds. to the list. [25]. [15] [27] Android Oreo platform adds Wi-Fi support for Nearby Networks (NAN) based on Wi-Fi Awareness, [28] Bluetooth 5, [29] Wide Color Gaming Apps, [30] Web, API, API support to integrate the system level of VoIP applications and start working on remote screens. [5] Android Runtime (Art) provides performance improvements. [5] Android Oreo includes additional restrictions on background apps to extend battery life. [31] Apps can display "adaptive icons" for various containers defined by themes such as circles, squares, and squirrels. [32] Android Oreo adds native support for Advanced Audio Coding, Aptx, Aptx HD and LDAC Bluetooth codecs. [33] Android Oreo supports the new emoticons that were part of the Unicode 10 standard 10. It also introduced the new emoji font which transformed them significantlyTraditional round shaped figures, unlike the "Cropel" design, which was represented by KitKat. Android's core architecture has been improved, so vendor-dependent low-level code can be separated from the Android OS platform using the device level abstraction level, called the vendor interface. Vendor interfaces must be compatible with future Android releases. This new architecture, called Project Treble [36], allows you to speed up the development and deployment of Android updates for devices, because vendors will only have to make the necessary changes to their software in the package. [37] [38] All devices that come with Oreo must support the vendor's interface, but this feature is not required for previous version Oreo devices. [39] The Upter Upter update system has also been changed to download updates directly to the system section, instead of requesting its preliminary downloads from the user section. This reduces the disk space requirements for updating the system. [40] Android - Oreo represents a new automatic recovery system, known as "Rescue Party"; If the operating system detects consistent malfunctions of core system components during launch, it will automatically perform a number of consistent recovery steps. If all independent recovery steps are exhausted, your device will be restarted in recovery mode and offer to reset settings. [41][42] The Neural Network API is also featured in the Android 8.1 update, which aims to "provide] devices for hardware acceleration for on-device machine learning". This API is designed for use with machine learning platforms, such as Tensorflow Lite, and specialized accompaniment, such as the Pixel Visual Core (present in Google Pixel 2 smartphones, but inactive at version 8.1), but also provides an emergency CPU operating mode. [43] [44] Main article Android Go: Android GO Distribution for lower-tier devices, known as Android Go, was featured for Oreo. It is designed for devices with RAM up to 1 GB. This mode is optimized by the platform to reduce mobile data usage (including the default traffic saving mode) and a special mobile services package from Google, designed to use a smaller amount of resources and throughput. Google Play will also distinguish light applications suitable for these devices. [45][46] The OS interface with the quick settings panel has been changed.Greater emphasis on battery information, mobile data limit and available memory, the menu of the last applications with a changed system and four applications (to reduce RAM consumption) and API, which allows mobile operators to enter data tracking and augmentation in Android settings. Menu. [29] Google Play services are also modular to reduce capacity. [29] Android GO was available to manufacturers of the original equipment for Android 8.1. [43] The security of Android Oreo is strengthened with a package of security measures provided by Google Play services called "Google Play Protect", including the automatic scanning of the Google Play and Appscan store. Unlike the general -system setting, which allows you to install applications from sources from outside the Google Play store, this function is now implemented as a permission that can be assigned to individual applications (i.e. F. -Droid, customers). The verified start -up now includes the "Cancel Protection" function, which limits the return of the device to the previous version of Android to prevent a potential thief from breaking security by installing the previous version of the operating system in which they are not available to install.
