Expressing ideas in the form of drawings and models is usually required in the early stages of the study: LEARNING FROM THE THE Å ĉ Å ĉ, ¥ Å~Å "is the only way for students to quickly develop a repertoire for their work design. However, there are important issues to consider between the phases of designing the concept space and recreate it in a drawing to two or three dimensional or a physical model: how to build a free perspective drawing hand? What plan designs are needed to submit my design? What scale should be my role model and what material should I use to build it? the architectural presentation of the basics combines the single volumestrantrico design very successful. CAD, modeling modeling and architectural photography of essentials series base with a volume of the volume still entitled. Step-by-Step, transmits possible ways to submit architectural designs during the various stages of the prog hectogram. In an informative and practical approach, the publication discusses the basics of architectural representation by freehand drawing, which is particularly important in the design phase, the design of the plan, the model and architectural photography. The architect student learns the necessary tools to present their work, supported by many concrete examples and practical suggestions which are directly applicable. The book requires authentication The 2007 book requires authentication 2008 This book takes the 2008 Authentication The classic architect's main task is project planning, from basic evaluation to design up to execution planning, the call for bids, the construction management and the completion of the building. This volume explains the individual steps in In the context, it has the networking of the various specialists involved in the project and offers a clear and practical description of the various levels of organization. The planning times of the basic evaluation a a Above the keys, - participants of the project (including the authorities, specialized planners, construction companies, etc.), - Organization of the plan (sequence, what necessary when?, Organization of work, documentation), - Coordination of the participants. The book requires authentication 2021 at the beginning of their studies architectural students are compared with a wealth of different ways in which they visually present their designs. Express ideas in the form of drawings and models are usually needed in the early stages of the study: Å ĉ Å, ~ "learning of the bother is the only way for students to quickly develop a repertoire for their design work. However , there are important issues to consider between the phases of designing the spatial concept and recreating it in a two or three-dimensional design or a physical model: how to build a freehand drawing of perspective? What drawings of the plan are needed to present my design ? Which scale should be my model and what materials should I use to build it? The basic architectural presentation combines the technical design of the very successful single volumes, freehand drawing, freehand drawing, model of model (new Edition) and architectural photography from the series bases in a new volume. Step-by-Step, transmits possible ways to present architectural projects during the Various phases of the project. In an informational and practical approach, the publication discusses the basics of architectural representation by freehand drawing, which is particularly important in the design phase, design of the plan, model and photography of architecture. The student architect learns the tools needed to present their work, supported by many concrete examples and practical suggestions that are directly applicable. Book Request Authentication 2017 Book Request Authentication 2016 Reserve Authentication 2017 Book Reserve Authentication 2017 Reserve Authentication 2017 Reserve Authenticaizone 2015 Reserve Authentication Request Authentication 2007 Reserve Authenticaizone 2021 Reserve Authenticaizone 2007 The book requires authentication The book requires authentication 2021 The timber is one of the two materials from Elementary and ancient construction used by humanity, and has not yet lost any attractiveness and actuality. In many cultural spheres and climatic zones, the main methods of construction of domestic architecture include both masonry construction and timber construction. However, this living material, light and easy to work has specific features that have an impact on how it is used in construction in different ways than other construction materials. To develop high quality projects that adapt to the material, architects must be familiar with the specific characteristics of this building material and with the rules governing the construction of timber. The new edition of the basic basic timber construction volume lists the most common solid wood construction systems, including using solid wood wall elements, as well as rules, applications and relevant details. Book Request Authentication 2017 Book Request Authentication 2007 Book Request Authentication 2008 Book Request Authentication 2013 Book Reserve Authentication 2014 Reserve Authentication 2009 Book Request Authentication 2009 Book authentication 2017 The book requires authentication 2018 The book requires 2018 authentication the size of the fundamental elements of the Office workplaces Å ĉ Å, ~ Å ĉ Å, ~ "desk and chair Å ĉ Å, ~ Å ĉ Å, ~ " Together with the necessary circulation areas to determine the design of office buildings. Starting from the module of the individual workplace, spatial configurations Large derive from the addition of these workplaces in a variety of agreements, resulting in different types of office layout. In addition to the space required for the desk and chair, it is necessary to provide the necessary distances and the floor area for cabinets, movement and circulation paths within office rooms. Basics Office Design explains the parameters of The common design task clearly and easy to understand, placing most of the emphasis on ergonomics, comfort and orientation as on spatial requirements, functional relationships and different types of offices. Book Request Authentication 2009 Book Request Authentication 2008 Book Requires authentication 2021 Book Requires 2018 authentication The size of the fundamental elements of the workplace site is Å ģ Å ĉ Å~a desk and chair Å ģ Å ĉ Å ĉ Å~a together with the necessary circulation areas determines the design of office buildings. Starting from the module of the individual workplace, the larger spatial configurations derive from the addition of these workplaces in a variety of agreements, resulting in different types of office layout. In addition to the space required for the desk and chair, it is necessary to provide the necessary distances and the floor area for cabinets, movement and circulation paths within office rooms. Basic design design explains the parameters of this commonly designed design task and easy to understand, positioning the same emphasis on ergonomics, comfort and orientation as on space requirements, functional relationships and different types of offices. The book requires 2019 authentication The book requests 2008 authentication The main task of the classical architect is the project planning, from the basic assessment to design up to the execution planning, the call for offers, management of the Buildings and completion of the building. This volume explains the individual planning steps in the context, presents the networking of the various specialists involved in the project and offers a clear and practical description of the various organization levels. These are the basic evaluation steps to deliver the keys, - participants of the project (including the authorities, specialized planners, construction companies, etc.), - plan organization (sequence, what necessary when?, Work organization, documentation), - Coordination of the participants. Book Request Authentication 2008 Book Request Authentication 2008 The book requires authentication 2021 Book request authentication 2021 The book requires authentication 2021 The book requires 2013 authentication from project planning to construction site: the basics for a career start the task The main architect of the classical architect, in addition to architectural design and work planning is the management of the construction project: from planning operations and offer, cost planning and planning and construction management. These important practical tasks are usually covered only during the studies of a topic: construction management or construction economy, and therefore less significant treated. But every architect must master these abilities to successfully manage and implement their projects. How are the individual processes related? How do the different levels of organization work? Due to narrow deadlines and highly interdependent processes, planning is an important prerequisite for implementing the successful project. Architects have a duty to control all those who are involved and get their services at the right time. The management of BASIC architectural projects brings together the individual volumes of success, project planning, race, construction planning and site management from the basis of student series in a single volume, which is completed by the budget of New book, not yet published and answers in a publication The crucial Hows and Whys of Construction.
