Cars lightning mcqueen coloring pages

Can't decide what color to spec your new car in? These predicted trends could help. Choosing the color of your new car may seem like a quick decision for some, but there is a lot more psychology at play. The color not only dramatically affects your vehicle's appearance, but can represent certain qualities that some find especially desirable. For instance, Lincoln has clearly defined why blue is the brand's signature paint color.Now, a new 2020-2021 Automotive Color Trends collection by BASF, a manufacturer of automotive coatings, suggests that globally, the next generation of cars will see a focus on greyish green, warm beige, and coarse gray colors. The researchers use macro trend analysis to come up with colors that will be popular not just globally, but in specific regions. The latest collection has been called Code-X. BASF BASF BASF In North America, Dark Seltzer was presented as part of the collection as a key color in this region. The medium-dark gray shade is one of two other shades - Redolent Red and Abstraction Blue - that formed part of the color trend report for the US Grays - and darker hues in general - have been popular for some time, with the latest Honda Accord now available in a Gray Pearl shade and many automakers offering optional blacked-out editions in 2020.The three key global colors are Social Camouflage (grayish-green), Pundits Solution (a warmer beige), and Dark Seltzer. BASF describes Social Camouflage as a "natural" color with a coolness that "represents flexible values and behaviors." BASF BASF BASF The Pundits Solution features a more distinctive gold sparkle effect that is described as both extraordinary and strange, while the Dark Seltzer is coarser, with a greater emphasis on texture. In Asia Pacific, Dream Fighter (a subdued orange with hints of pink and copper) and Unknown Metal (a grayish purple hue) were selected as prominent in that region, along with Social Camouflage, as warm, emotional shades that reflect positivity. Finally, the colors chosen for the EMEA region were Hiatus Gray, Pundits Solution, and Intron Green.In general, the latest colors appear to be of a pastel variety, coming across as more delicate and soft, less garish, and more in tune with the natural world. With the move towards electrified, emissions-free vehicles that are far less polluting than before, perhaps this isn't a great surprise. Honda Honda Lincoln Lincoln Make a fun coloring book out of family photos with photography blog Fototiller's simple three-step tutorial. All you need is Photoshop (or similar), a good photo, and a couple of minutes.My seven year old was just about beside herself with glee at the prospect of coloring family pictures, and I'm betting your kinder will be pretty excited, too. This would also be a potential great gift for family members, as well as a good time-filler for doctor's appointments, road trips, etc.Coloring pages from your photos [Fototiller via Parent Hacks] Image: Shutterstock When you roll down the highway of life, you should look your very best! Since you spend some much time in your car, your car's color should match your personality! If you are an introvert, cruising around in a fire engine red convertible might give you a boost of confidence. How long can that feeling last, though? You need a car with a paint job that matches you perfectly to have real, long-term satisfaction. To determine the car color that suits you best, we need to get to know you and your lifestyle quite well. We wouldn't feel comfortable telling you the car color that suits you best with sketchy information. Whether you see yourself in a mint green economy car or a jet black sportster, your vehicle is a representation of yourself. The first thing people notice about your car is the color. To give accurate first impressions to everyone on the road, you really must have a car color that best showcases your spirit, your soul, and your personality!Share your driving habits and your likes in life. Once we feel like we know you as well as our siblings, we'll spill the colorful beans about your car's perfect paint job? Let's hit the road! Our award-winning website offers reliable, easy-to-understand explanations about how the world works. From fun quizzes that bring joy to your day, to compelling photography and fascinating lists, HowStuffWorks Play offers something for everyone. Sometimes we explain how stuff works, other times, we ask you, but we're always exploring in the name of fun! Because learning is fun, so stick with us! Playing quizzes is free! We send trivia questions and personality tests every week to your inbox. By clicking "Sign Up" you are agreeing to our privacy policy and confirming that you are 13 years old or over. Copyright © 2021 InfoSpace Holdings, LLC, a System1 Company Feb. 11, 2015 / 1 min read It's a black and white issue.That's what the folks behind auto leasing website SwapALease.com learned when they analyzed the color of the vehicles listed on their website. Some 80 percent of the cars and trucks in the leasing database are in the grey family. That includes white and black. Black is the most common color in the SwapALease.com database at 31.4 percent, followed by white (19.6 percent) and silver (13.1 percent). Dark grey (9.1 percent) and grey (6.5 percent) round out the top five most popular colors. Red, ranked sixth, is the first color not in the grey family in the top 10, and represented 5.2 percent of cars in the leasing database. Black 31.40% White 19.60% Silver 13.10% Dark grey 9.10% Grey 6.50% Red 5.20% Blue 3.60% Dark blue 2.60% Brown 1.00% Dark red 1.00% Light blue 0.90% Maroon 0.80% Off white 0.80% Gold 0.70% Light grey 0.50% Dark brown 0.50% Tan 0.50% Yellow 0.50% Orange 0.40% Beige 0.40% Dark green 0.30% Green 0.30% Purple 0.10% Source: Swapalease.com; based on vehicles listed on its online marketplace The SwapALease.com findings generally mirror what other groups have found. The Axalta Automotive Color Popularity Report for 2014 found, for example, that white was the most popular color worldwide for the fourth year in a row. Some 29 percent of vehicles are white while 19 percent are black.In North America, 25 percent of vehicles are white — 17 percent are solid white, while 8 percent are pearl white. Just one type of vehicle bucked this trend. Black is the most popular color for the luxury SUV segment. Axalta, a global supplier of liquid and powder coatings, found.Going forward, Axalta forecasts trends will emerge in four color groups: pale hues, bright colors, muted versions and dark shades.Going greyAs for SwapALease.com, it found that grey has been a popular color since before the recession. In 2014, shades of grey represented 76.5 percent of the site's database. "Red and blue were much more prominent in the Swapalease.com marketplace in the early and mid-2000s, but since around 2005 the popularity of grayscale cars and trucks began to emerge," says Scot Hall, executive vice president of SwapALease.com.Do you feel strongly about driving a car of a certain color? Read What your car color says about you.Tara Baukus Mello writes the cars blog as well as the weekly Driving for Dollars column, providing both practical financial advice for consumers as well as insight into the latest developments in the automotive world. Follow her on Facebook here or on Twitter @SheDrives. Pay attention when you drive past any new car dealership and you may be struck by a certain sameness. Indeed, for the past two decades, white, silver, black, and gray have been the most popular car colors and 8 in every 10 cars is one of those colors. Based on an authoritative annual survey of car color trends, white is the clear global winner in the 2019 color race—for the ninth consecutive year—with 38% of vehicles manufactured in that color, followed in second place by black at 19%, gray at 13%, and silver at 10%. The order in North America is slightly different, with 29% white, 19% black, 17% gray, and 11% silver. Only in Europe is white in second place with 24% of all cars gray, and 23% white. Nearly 50 years ago, in 1961, blue reigned supreme with 26% of all cars in North America manufactured in that hue. The reasons behind car color choices are hard to pin down. One automotive paint executive speculates that silver and gray hues reflect our fascination with technology. It's the brushed chrome hue on a laptop cover or the gloss of smartphones and other devices. Silvery and techno-gray hues also seem to accentuate the angular, edgy design of luxury sports vehicles. They may even lend a dab of sportiness to a family sedan. It could also be that people see cars in neutral hues as easier to clean, and less likely to be noticeably dirty when marred by the (usually gray) stuff our car picks up as a result of driving through congested cities, hurtling down the highway or kicking up mud on the backroads. In the earliest days of the automobile, cars were called horseless carriages—and that's exactly what they looked like. Horse-drawn carriages were usually painted a dignified black. The quality of the paint was poor, and automobile owners found that their shiny new toys quickly faded to a sickly yellow color. Not exactly the peak of refinement. When the Ford Motor Company began producing the iconic Model T, contrary to the legend, it was available in different colors. After 1913, the company turned to all black and created a new process of car painting using a hard-wearing asphalt-based paint that dried quickly. By the early 1920s, Ford teamed up with the DuPont Company, which created an improved "Duco" process that could be used to paint vehicles in any color of the rainbow. The paint dried in a few hours rather than days. The Depression of the 1930s did not put consumers in a mood for bright colors. Cars, like fashion, took on dull green and gray hues, according to German automotive color historian Gundula Tutt. They would stay that way through the Depression years and the World War that followed. With peacetime came an explosion of candy-colored vehicles, but the trend of monotone vehicles was hard to break. Although the shades toned down a bit over the years that followed, a liking for color in cars didn't entirely disappear. In 1976, the year of America's bicentennial, the most popular car colors were red, white, and blue. The idea that certain colors of car cost more to insure is a myth. Insurance companies don't even ask what color your car is. Your red car will be more expensive to insure if it's a sports car and if it is a model that is more costly to repair. Color has relatively little impact on resale value, compared with a car's condition and age. Still, people generally prefer to purchase cars that are white, black, gray, or silver. If you paint your vehicle bright purple, you might have a harder time selling it. It's best to stick to the standard palette. After all the tough choices associated with buying a new car, choosing a color can feel like the cherry on top. But what most people don't realize is that your choice can also be a peek into your subconscious.Today's drivers particularly love white, as it's been the No. 1 paint choice for years. Together, the palette of black, silver, gray and white makes up 75% of new cars on the road, according to PPG Automotive Coatings' 2015 survey. Less common are beiges and reds at 8% each, followed closely by 7% blue and a measly 1% green.Why such neutral hues? Certainly not for lack of trying on the automakers' part, as the 2016 Mini Cooper comes with 12 color options, including "Volcanic Orange."Some point to America's technology craze, thanking our laptops for the silver fascination and Apple for the white takeover. Others point to the better trade-in value of more classic colors."Unlike black, white or silver, bright colors or colors tied to current trends tend to look dated sooner. ... That can sometimes lead to lower resale value as fewer used-car shoppers are looking for bright colors like orange and yellow," says Brian Moody, executive editor of Autotrader.When Autolist crunched the numbers on 3.5 million cars, it too found that white is the most popular color — but it dug deeper to find price variations among colors based on car types and models. For instance, it discovered that red commands the best price for convertibles, while black gets top dollar among pickups.Beyond the practicalWhile modern trends and resale value definitely play a role in paint popularity, there's still a lot of room for fun and self-expression with the choice. Even within the top colors, different hues can reveal various likes, dislikes and habits of the car owner."The colors we choose tell the world something about us," says Kate Smith, president of Sensational Color, a color consultation company. "The color of our car we drive, the cell phone we carry and the home we live in all reveal something about our personality."We break down what each of the most consistently popular car colors, according to PPG.com, may reveal about their drivers:WhiteWhite has been a top pick since the late '90s, a time period also associated with the popularity of Apple products. White puts a fresh face to the world and embodies a modern, sleek look."You can handle a million details and are often asked to take on more than is expected of others," Smith says of those who choose white. "Others see you as diligent, hardworking and someone whom they can depend on."BlackPeople who choose black cars want to portray confidence and sophistication, and often love being in control, Smith says. It can also signify a driver who is defined and strong — or at least wants to be perceived that way."The slick, shiny nature of well-executed black paint can lend a classy or upscale vibe even to less-expensive cars," Moody adds.GrayGray car owners are relaxed but have impeccable taste. Typically mature, dignified people — and never flashy — they're also peaceful people who compromise easily, according to a 2014 study by RepoKar Public Auto Auction. Gray is proudly different than silver: more calming, less shiny."New ideas inspire you, but you are wise enough to know which ones are worth following and which ones aren't," Smith says. "You have a quiet strength that others find appealing."SilverSilver cars have more of a metallic shine than their gray cousins, similar to laptops and stainless steel kitchen appliances — meaning these drivers are tuned in to modern styling. Silver lovers tend to be business-savvy, upbeat and energetic individuals, according to several sources. And, luckily for their owners' busy lifestyles, silver cars are top-notch for camouflaging grime and scratches.Brown and beigePeople who own a brown or beige car are typically down-to-earth, according to Color-meanings.com. These owners are easygoing and fiscally responsible, not to be enticed by bright colors or flashy gadgets. They prioritize reliability and comfort.RedIf you own a red car, Smith says, you're likely a magnetic person. "You love attention, which for you isn't hard to get," she says. "Your energetic personality attracts others, and your drive to achieve your goals makes them stick around because it motivates them to do the same."Red car owners tackle challenges head on but can be restless and aggressive at times. Some people think red cars attract more speeding tickets due to their hot-rod appearance, but there's no hard data to support this.BlueOwners of blue cars are calm and collected, Smith says. Drivers of light-blue and medium-blue cars are friendly, trustworthy and dependable. The darker the blue gets, the more confident and authoritative the driver tends to be.Blue may also be the best up-and-coming pick for resale value. Jane Harrington, color styling manager at PPG, says she thinks blue will supplant white as the most popular car color in the U.S., having seen it pop up consistently in recent auto shows.
